

Densealloy Pipe Stub

The **Dense Flow Densealloy Pipe Stub** is a 2' hardened section of SCH. 80 pipe. Our Densealloy Hardening process insures the stubs I.D. is 600 BHN which translates into a piece of pipe that will last up to 8 times longer than non hardened pipe.

The Densealloy Pipe Stub was designed as an alternative to replacing an entire length of pipe. Our engineers found that on most pneumatic pipelines the most wear occurred within the first two feet after an elbow or bend. Also, because the Pipe Stub is only two feet in overall length it is replaced must easier than entire length of pipe.

Features

- Densealloy Hardening
- 600 BHN Hardness
- Sch. 80 Pipe
- Weld On Flange

Benefits

- Increased Lifespan
- Less Downtime
- Lower Maintenance Cost
- Easy Replacement

Applications

- Dense Phase Conveying
- Dilute Phase Conveying
- Truck Unload Pipelines
